

MPS 48-10 Slat Filling Machine

The 48-10 slat filler utilizes just 48 slats yet maintains enough pick-up area to provide full coverage to each slat. The independently driven top brush combined with the powerful vibrator provides enough control and agitation to fill

each slat 100%. Product falls into 10 divided chutes where it is led into a custom funnel, then straight to the opening of the awaiting bottles. As bottles index

the slats stop advancing until a fresh set of bottles is in place. The 48-10 requires no blank slats, no striker slats, and utilizes only 48 slats per product run. This machine provides users with high production rates at economical prices.

Standard Features

Up to 150 BPM (based on 100 count 20 drop slat)	Hopper Level Proximity Sensor
100 % Accuracy	Variable Speed Top Brush
10 Drop or 5 Drop Funnels	Dual Dust Extraction Points
Motorized Height Adjustment	Static Eliminator
cGMP Design	Bottle Detection
Easy to Disassemble Product Contact Parts	Large User Friendly Touch Screen Interface (Color)
Only 48 Slats per run	Safety Clutch on Head Drive
Slat Interchangeability	Safety Interlocks
